

Normalizing Data sets

The paper used the following approach

(A) Dirghikaran (Prep_Dir): Because multiple characters have the same sound, inconsistencies appear even for the same word written in Devanagari script. We use the following mappings to normalize the character variants: ि -> ी, ु -> ू, स -> श, ष -> श, व -> ब, उ -> ऊ, ्री -> ृ, रि -> ्री, इ -> ई, ं -> ँ, न -> ण, ः -> इ. This converts the words with different orthographic forms to a normalized form, e.g., किताव, and किताब both map to कीताब. This approach does not affect the tokens that are already transliterated in Romanized form or written in English.

RAW DATA

```
{
  "ID": "qmugat",
  "Comment": "Did she said sexy milan 😂😂",
  "Label_Binary": "NOFF",
  "Label_Multiclass": "NO"
},
{
  "ID": "gtufoq",
  "Comment": "कूरौटे गफाडी कौडीको काम छैन करोडौंको आफ्नो चर्चा आफै  
गर्ने तीमीले न छोराको लागी गर्नु छ न त नातीको लागी नै तर जनता को लागी काम गरीदीए  
इतीहास मा वाह दशरथ भनेर त लेखीन्थ्यो होला नी घण्टा काम गर्छु भन्छौ कीन१८ घण्टा हैन  
प्रत्यक दीन मीनेट जनताको हीतमा काम गरेर देखाउ",
  "Label_Binary": "OFF",
  "Label_Multiclass": "00"
},
```

Normalizing the data using python script which included a character map and regular expression to change such characters

```
NORMALIZATION_MAP = {  
    "ि": "ी",  
    "ु": "ू",  
    "े": "े",  
    "श": "स",  
    "ष": "स",  
    "ृ": "रि",  
    "ऋ": "रि",  
    "ँ": "ं",  
    "ई": "इ",  
    "ऊ": "उ",  
    "ै": "े",  
    "ौ": "ो",  
    "ण": "न",  
}
```
