Different online AI chatbots were implemented to translate data

Translating Individual Lines

Sala randi, nareko nam ma kalanka ho, aama dede baine ko ijot nai fali yasla

साला रन्डी, नरेको नाममा कलङ्क हो । आमा-दिदी-बहिनीको इज्जत नै फाल्यो यसले ।

Translating in Batches

Using X AI following prompt engineering

hi , i will be giving you portion of csv files in batches , i want you to keep the format same without changing the structure. You may encounter 3 cases in the second coma -if the sentence is written in nepali keep it as it is , if it is in english change it to nepali , if the sentence is in romanized nepali change it to devnagiri

Hi! Understood.

I'll keep the exact same CSV structure and format as you provide (no changes to columns, order, quotes, commas, etc.).

For the second column (I assume you mean the field after the first comma):

- If it's already in Devanagari Nepali → keep it exactly as is
- If it's in English → I'll translate it to natural Nepali (Devanagari)
- If it's in Romanized Nepali (e.g., "mero naam Ram ho") → I'll transliterate/convert it to proper Devanagari Nepali

You can start sending the batches whenever you're ready. I'll process each one and return the updated CSV portion with only the necessary changes in the second column. Go ahead!
